Currently on the UK Graduate visa

Professional Summary

MSc Data Science graduate (Merit, University of Salford) with hands-on experience across the analytics lifecycle — from SQL/PySpark data pipelines to Power BI reporting to interpretable ML modelling. Built a seven-class credit grade prediction pipeline on 2.26 million loan records during an industry-partnered internship with Fildata (Macro F1 0.640, AUC-OvR 0.951), validated against real-world default data with perfect monotonicity (Spearman $\rho = 1.00$) and 99.2% economic span retention, with SHAP-based explainability aligned to Basel IRB and GDPR Article 22.

Core Skills

Analytics & BI: SQL (T-SQL, Spark SQL), Power BI (DAX, star schema), Excel
Programming & Engineering: Python (pandas, scikit-learn), PySpark & Databricks, feature engineering & ETL, Git, Jupyter
Machine Learning: Classification, clustering, NLP, model calibration, SHAP model interpretability
Domain — Credit Risk: WoE/IV, ordinal classification, Basel IRB-aligned modelling, GDPR Article 22 compliance

Professional Experience

Data Science Intern, Fildata, UK

Jan 2026 – Apr 2026

- Built a seven-class ordinal credit grade prediction pipeline on 2.26M loan records using HistGradientBoosting, SHAP, and WoE/IV; achieved Macro F1 = 0.640, AUC-OvR = 0.951, Weighted Kappa = 0.794
- Validated model outputs against real default-rate data, confirming perfect monotonicity (Spearman $\rho = 1.00$) and 99.2% economic span retention across 1.12M resolved loans
- Presented findings and model behaviour to senior stakeholders via structured reports and SHAP force plots, translating technical output into business-ready recommendations

Software Engineering Intern, Tata Elxsi, India

Jan 2024 – Jun 2024

- Automated a testing procedure for autonomous vehicle training within CARLA, a simulated driving environment, identifying data quality issues and system performance patterns within a regulated Agile engineering environment

Additional Experience

Care Assistant, Home Instead, UK — Jan 2026 to present (part-time, held concurrently with studies and the Fildata internship). GDPR-compliant digital record keeping and structured documentation.

Care Assistant, Care At Home Group, UK — Jan 2025 to Dec 2025 (part-time, held alongside MSc studies). GDPR-compliant digital record keeping and structured documentation across a regulated community care setting.

Selected Projects

NHS GP Prescribing Cluster Analysis, Python, K-Means, PCA

- Clustered GP practices by prescribing volume and cost; identified a small number of high-cost outlier practices warranting policy review, from a national-scale dataset

British Airways Sentiment Analysis, Python, NLP, TF-IDF, SVM

- Built an imbalance-aware sentiment classifier on airline reviews; found delayed baggage handling and cabin crew responsiveness as the two largest drivers of negative sentiment

Clinical Trials & Population Dashboard, Spark SQL, Databricks, Power BI

- Processed 500,000+ clinical trial records via Spark SQL and built a Power BI dashboard with DAX measures on global population KPIs, together demonstrating end-to-end capability from large-scale data processing through to stakeholder-facing reporting

Education

MSc Data Science — Merit (68.8), University of Salford, UK

Jan 2025 – May 2026

B.Tech Information Technology — 8.53/10 (First Class), CUSAT, India

Nov 2020 – Sep 2024
